

ETHICS AND MALPRACTICE STATEMENT

Responsibilities of Authors:

Authors are expected to present original research that has not been published elsewhere. All data, methods, and findings should be accurately reported, without fabrication, falsification, or inappropriate data manipulation. Authors must properly acknowledge the contributions of others, including citing relevant work. Furthermore, authors should disclose any potential conflicts of interest that might influence the results or interpretation of their work.

Handling Ethical Misconduct:

The RCAA 2026 conference takes ethical misconduct seriously and has established procedures to address such issues. If unethical behaviour is suspected, the editorial board will investigate the matter thoroughly. All investigations and actions will be conducted in accordance with the principles of fairness, confidentiality, and transparency.

Plagiarism Prevention:

To maintain the integrity of the conference proceedings, all submitted manuscripts will be screened for plagiarism using specialized detection software. Manuscripts found to have a similarity index exceeding 10% will be scrutinized, and authors may be asked to revise.

Authors are required to ensure that the manuscript contains no more than 20% AI writing detection. The use of AI-assisted tools must be limited to improving language and readability and should not replace the authors' original intellectual contributions. Authors remain fully responsible for the accuracy, originality, and integrity of the submitted work.
